### Nomenclature

|            |                           |
|------------|---------------------------|
| $A$        | Area                      |
| $C_f$      | Vacuum thrust coefficient |
| $c_s$      | Speed of sound            |
| $\dot{m}$  | Mass flow rate            |
| $M$        | Molar mass                |
| $Ma$       | Mach number               |
| $mol\%$    | Mole percentage           |
| $P$        | Pressure                  |
| $R$        | Gas constant              |
| $R_s$      | Specific gas constant     |
| $T$        | Temperature               |
| $v$        | Velocity                  |
| $\epsilon$ | Nozzle area ratio         |
| $\gamma$   | Ratio of specific heats   |
| $\rho$     | Density                   |

### Subscripts

|       |                |
|-------|----------------|
| $a$   | Ambient        |
| $c$   | Chamber        |
| $e$   | Exit           |
| $t$   | Throat         |
| $x,y$ | Given Position |
| $0$   | Stagnation     |

## 1 Thermodynamic Relations [1]

### 1.1 Isentropic Flow Relation

$$\frac{T_x}{T_y} = \left( \frac{P_x}{P_y} \right)^{\frac{\gamma}{\gamma-1}} \quad (1.1)$$

### 1.2 Isentropic Total To Static Temperature Relation

$$0 = \frac{T}{T_0} \left[ 1 + \frac{1}{2} (\gamma - 1) Ma^2 \right] \quad (1.2)$$

### 1.3 Isentropic Total To Static Pressure Relation

$$0 = \frac{P}{P_0} \left[ 1 + \frac{1}{2} (\gamma - 1) Ma^2 \right]^{\frac{\gamma}{\gamma-1}} \quad (1.3)$$

### 1.4 Isentropic Mach Number

Equations (1.2) and (1.3) can be rearranged to solve for the Mach Number

$$Ma = \sqrt{\frac{2}{\gamma - 1} \left( \frac{T_0}{T} - 1 \right)} \quad (1.4a)$$

$$Ma = \sqrt{\frac{2}{\gamma - 1} \left( \frac{P_0}{P}^{\frac{\gamma-1}{\gamma}} - 1 \right)} \quad (1.4b)$$
